This is a simplified object-oriented Python wrapper for libpcap - the current tcpdump.org version, and the WinPcap port for Windows.

Example use:

```
>>> import pcap
>>> sniffer = pcap.pcap(name=None, promisc=True, immediate=True)
>>> addr = lambda pkt, offset: '.'.join(str(ord(pkt[i])) for i in xrange(offset, offset + 4)).ljust(16)
>>> for ts, pkt in sniffer:
... print ts, '\tsrc', addr(pkt, sniffer.dloff + 12), '\tbst', addr(pkt, sniffer.odloff + 16)
...
```

Windows notes

WinPcap has compatibility issues with Windows 10, therefore it's recommended to use Npcap (Nmap's packet sniffing library for Windows, based on the WinPcap/Libpcap libraries, but with improved speed, portability, security, and efficiency). Please enable WinPcap API-compatible mode during the library installation.

The sample installation using Chocolatey:

choco install -y npcap --ia '/winpcap_mode=yes'

Installation

This package requires:

- libpcap-dev
- python-dev

To install run

```
pip install pypcap
```

2.1 Installation from sources

Please clone the sources and run:

```
python setup.py install
```

Note for Windows users: Please download the WinPcap Developer's Pack, unpack the archive and put it into the sibling directory as wpdpack (setup.py will discover it).

Sample procedure in PowerShell:

```
cd ..
wget -usebasicparsing -outfile WpdPack_4_1_2.zip http://www.winpcap.org/install/bin/

WpdPack_4_1_2.zip
unzip WpdPack_4_1_2.zip
cd pypcap
python setup.py install
```

Help the Project

4.1 Contributing

4.1.1 Report a Bug or Make a Feature Request

Please go to the GitHub Issues page: https://github.com/pynetwork/pypcap/issues.

4.1.2 Checkout the Code

```
git clone https://github.com/pynetwork/pypcap.git
```

4.1.3 Become a Developer

pypcap uses the 'GitHub Flow' model: GitHub Flow

- To work on something new, create a descriptively named branch off of master (ie: my-awesome)
- Commit to that branch locally and regularly push your work to the same named branch on the server
- · When you need feedback or help, or you think the branch is ready for merging, open a pull request
- · After someone else has reviewed and signed off on the feature, you can merge it into master

New Feature or Bug

```
$ git checkout -b my-awesome
$ git push -u origin my-awesome
$ <code for a bit>; git push
$ <code for a bit>; git push
$ tox (this will run all the tests)
```

- Go to github and hit 'New pull request'
- Someone reviews it and says 'AOK'
- Merge the pull request (green button)

Indices and tables

- genindex
- modindex
